

# TOILET LEAK TEST

Follow these four simple steps to perform a toilet leak test. If your toilet has a leak, contact a licensed plumber to investigate and repair.

## STEP 1

Remove the tank lid on the toilet.

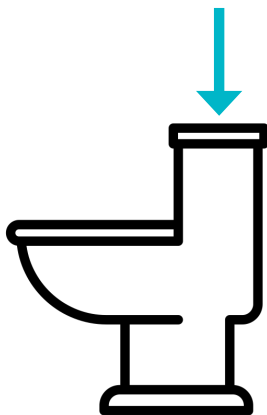

## STEP 2

Place 10 drops of food coloring inside the tank. Red or green work best.

## STEP 3

Replace lid. Do not flush the toilet for a couple of hours.

## STEP 4

Check the water in the toilet bowl. If colored water appears, that means you have a leak. Make sure to flush the toilet to prevent staining.
