## GAS AND WATER INFRASTRUCTURE REPLACEMENT

This project may require the replacement of your gas and/or water service line and meters to your home or business, all at no cost to you.

### WHY

- Relocating gas and water mains ahead of **City of Bennington Warehouse Street Improvements** project.
- Investing in your neighborhood.
- To continue providing safe, reliable gas and water services by maintaining systems as efficiently and cost-effectively as possible.
- Part of M.U.D.'s Infrastructure Replacement Program.

### WHEN AND HOW LONG

- Work will begin soon and continue for a couple months, barring any unplanned delays.

### WHAT YOU MAY EXPERIENCE

- Installation of new gas and water main.
- Excavation pits of various sizes and piles of dirt – some may remain during the entire project.
- Trucks and equipment, gas and water pipe, safety fence and cones.
- Streets, sidewalks, lawns and landscaping may be affected; however, all will be restored at the end of the project and as weather permits.
- Paving may be temporary or permanent dependent on if it is inside or outside the projects limits of the future Warehouse Street Improvements project.

### TRAFFIC AND PARKING

- Possible lane restrictions.
- Residents will be able to get in and out of their properties.
- Parking on the street is not recommended and may be restricted during the project due to the work.
- For the safety of you and our crews, please slow down when driving in the area.

### RECONNECTION WORK TO THE NEW MAINS

- **After the new mains are installed**, service reconnection work from the homes or businesses to the new mains will take place.
- The **gas** reconnection work may result in a brief interruption of your gas service and require up to three (3) appointments – the first to coordinate the location of the new gas service and meter, and the others to reconnect your gas meter (M.U.D.), relight gas pilots in your home or business (M.U.D.), and lastly to inspect your sewer lateral service (Backlund Plumbing or Zoom Drain) – this required inspection work is no cost to you.
- The **water** service reconnection work to be performed by a M.U.D. contractor may require a hole be dug in front of your home or business near the street to make this reconnection and may result in a brief interruption of your water service. A typical interruption could be 4 hours or less.
- You will be notified about 24 hours in advance of any planned gas or water interruption.

### A GAS INTERRUPTION

The gas work may result in a brief planned temporary interruption of your gas service, lasting typically 4 hours or less. Any appliance in your home or business that uses gas will not be available during the interruption (i.e., stove, water heater, furnace/boiler, etc.). Gas pilots will be relit by a M.U.D. technician after the interruption.

### TO PREPARE FOR A WATER INTERRUPTION

To continue using a tank-style toilet, fill a container with water and have a bucket nearby to scoop water into the toilet tank and fill about halfway **for each flush**.

Fill containers with water and keep on hand during the interruption to allow for handwashing and drinking.

### AFTER A WATER INTERRUPTION

It is normal for air to be in the water lines after a water interruption; please run your COLD water for about 10 minutes to release the air.

### QUESTIONS OR CONCERNS
