WATER INFRASTRUCTURE REPLACEMENT

This project may require the replacement of your water service line and meter to your home or business, all at no cost to you.

PROJECT TIMELINE

1

LOCATE UTILITIES

A technician from M.U.D. will be marking utilities with flags or paint. For the safety of everyone, please do not remove these flags or markings.

2

DIG EXCAVATIONS

Excavations of varying sizes will be made along the installation route to expose existing utilities. This work is necessary to ensure the installation of the new main does not conflict with underground services. Excavations at corner lots will be larger and will remain open until final connections are completed and the existing main is taken out of service.

3

INSTALL NEW WATER MAIN

The crew plans to bore (install) the main underground and beneath driveways. Should any driveway impacts occur, they will be properly restored.

4

RECONNECT INDIVIDUAL WATER SERVICES

After the newly installed main is filled and activated, each individual water service will be reconnected to the new main. This will include a brief water service interruption. You will be notified in advance of any planned interruption.

5

CUT OFF OLD MAIN AND TAKE OUT OF SERVICE

After the water main installation and service reconnection work is completed, the old water mains will be cut off and taken out of service. This process will include an additional temporary water service interruption lasting 4 – 6 hours. You will be notified in advance of any planned interruption.

6

RESTORATION

Restoration of lawns, landscaping, sidewalks, driveways, and streets will be performed at the end of the project. Because we are in colder weather, lawn restoration will be delayed until next Spring, when conditions are more suitable for successful growth. In addition, rock may be placed in sidewalk areas to maintain accessibility and stability throughout the winter months.

WHY

Metropolitan Utilities District will be relocating water mains ahead of a City of Bellevue Mission Avenue street improvement project.

WHEN AND HOW LONG

Work is scheduled to begin in January 2026 and will continue for several months.

TRAFFIC

Temporary lane restrictions may be in effect, and street parking may be limited. For everyone's safety, please slow down and use caution when driving in the area.

TO PREPARE FOR A WATER SERVICE INTERRUPTION

To continue using a tank-style toilet, fill a container (a bathtub works great for this) with water and have a bucket nearby to scoop water into the toilet tank and fill about halfway **for each flush**.

AFTER A WATER SERVICE INTERRUPTION

It is normal for air to be in the water lines after a water service interruption. Please run your COLD water for about 10 minutes to release the air.

Hydrants are generally in easement or Right of Way (ROW) and may be moved to accommodate the new main location and meet all fire codes.

If you have a physical disability and are worried about access to your home or business, please contact us.
