WATER INFRASTRUCTURE REPLACEMENT

This project may require the replacement of your water service line and meter to your home or business, all at no cost to you.

PROJECT TIMELINE

1

LOCATE UTILITIES

A technician from M.U.D. will be marking utilities with flags or paint. For the safety of everyone, please do not remove these flags or markings.

2

DIG EXCAVATIONS

Excavations of varying sizes will be made along the installation route to expose existing utilities. This work is necessary to ensure the installation of the new main does not conflict with underground services. Excavations at corner lots will be larger and will remain open until final connections are completed and the existing main is taken out of service.

3

INSTALL NEW WATER MAIN

The crew plans to install the new main underground and beneath driveways. If necessary, portions of driveways may be impacted during this work, but they will be fully restored. Temporary water service interruptions could occur during main installation. You will be notified in advance of any planned interruption.

4

RECONNECT INDIVIDUAL WATER SERVICES

After the newly installed main is filled and activated, each individual water service will be reconnected to the new main. This will include a brief water service interruption. You will be notified in advance of any planned interruption.

5

CUT OFF OLD MAINS AND TAKE OUT OF SERVICE

After the water main installation and service reconnection work is completed, the old water mains will be cut off and taken out of service. This process will include an additional temporary water service interruption lasting 4 – 6 hours. You will be notified in advance of any planned interruption.

6

RESTORATION

Restoration of lawns, landscaping, sidewalks, driveways, and streets will be performed at the end of the project.

WHY

This project is being performed ahead of the City of Bellevue's Mission Avenue Reconstruction and Streetscape Improvement Project.

WHEN AND HOW LONG

Work is scheduled to begin in June 2026 and is anticipated to continue through the Fall season.

TRAFFIC

Possible lane restrictions may be in effect. Street parking may be limited. For everyone's safety, please slow down while driving in this area.

TO PREPARE FOR A WATER SERVICE INTERRUPTION

To continue using a tank-style toilet, fill a container with water and have a bucket nearby to scoop water into the toilet tank. Filling the tank about halfway will allow for each flush. A bathtub works great for storing water.

AFTER A WATER SERVICE INTERRUPTION

It is normal for air to be in the water lines after a water service interruption. You may need to run your COLD water for about 10 minutes to release the air.

Hydrants are generally in easement or Right of Way (ROW) and may be moved to accommodate the new main location and meet all fire codes.

If you have a physical disability and are worried about access to your home or business, please contact us.
