WATER INFRASTRUCTURE REPLACEMENT

This project may require the replacement of your water service line and meter to your home or business, all at no cost to you.

PROJECT TIMELINE

1

LOCATE UTILITIES

A technician from M.U.D. will be marking utilities with flags or paint. For the safety of everyone, please do not remove these flags or markings.

2

SETUP AN ABOVE-GROUND TEMPORARY WATER SYSTEM

- To provide water service during this project, a temporary water service system will be installed for each home or business near the existing water service tap.
- Temporary 2-inch piping will be installed along the ground on the side of the street where the current water main exists.
- Affected driveways will continue to have access by using a temporary ramp that will be put in place.
- While the temporary water service is being installed, you may experience some minor water service interruptions.

3

DIG EXCAVATIONS AND INSTALL NEW WATER MAIN

A series of large excavations will be required to install the new water main. The project will use a pipe bursting installation method, which involves fracturing the existing underground cast iron main in place while simultaneously pulling new HDPE pipe into the main. This method provides a faster and safer installation process.

4

DISMANTLE ABOVE-GROUND TEMPORARY WATER SYSTEM

After the newly installed main is filled and activated, the above-ground temporary water system will be dismantled.

5

RESTORATION

Restoration of lawns, landscaping, sidewalks, driveways, and streets will be performed at the end of the project or as weather permits.

WHY

- Investing in your neighborhood by replacing the water mains in your area.
- Part of M.U.D.'s Infrastructure Replacement Program.

WHEN AND HOW LONG

Work is scheduled to begin in June 2026 and continue into the Fall season.

TRAFFIC

Possible lane restrictions may be in effect. Street parking may be limited. For everyone's safety, please slow down while driving in this area.

DURING THE PROJECT

- You may experience temporary water service interruptions lasting 4 – 6 hours or less. Customers will be notified prior to any planned interruption. To continue using a tank-style toilet, fill containers with water and have a bucket nearby to scoop water into the toilet tank and fill about halfway for each flush. Fill containers with water and keep on hand during the interruption to allow for handwashing and drinking. It is normal for air to be in the water lines after an interruption. Please run your cold water for about 10 minutes to release the air.
- Fire protection will be provided by nearby in-service hydrants, and the fire department has been made aware of the work.
- A series of large excavation pits to access the existing water main will be necessary and may remain for the duration of the project.
- Trucks and equipment, water pipe, safety fence and cones will be seen throughout the project area.
- M.U.D. will administer water quality and pressure tests throughout the project to ensure your water is safe and reliable.
